Dear Hiring Manager,

I am a 4th-year Automation and Computer Science student at the Technical University of Cluj-Napoca, and I am writing to express my interest in joining your team. I enjoy turning real problems into working software, and I am eager to keep learning in a professional environment alongside experienced engineers.

This summer I completed a 10-week App Developer internship at Tenaris Silcotub in Zalău, where I built internal business applications in Microsoft Power Apps, automated workflows and approval processes with Power Automate, and managed company data and documents in SharePoint. Working in an industrial setting taught me to translate end-user needs into practical solutions and to deliver on deadlines. During the internship I also completed a project management training with Ascendis, which helped me plan and structure my work more effectively.

Beyond the internship, I have built projects that cover the full development cycle. In **GymTech**, a team-built gym management platform, we used an ASP.NET Core Web API, Angular and SQL Server, with role-based access and automated tests. In **Guess the Flag**, I built a web quiz with a FastAPI backend, JWT authentication and a global leaderboard. In my computer vision project, an adaptive cruise control system combining semantic segmentation and YOLOv8 object detection, I reached 90.71% pixel-level accuracy and optimized the system to run on CPU only.

I learn quickly, enjoy working in a team, and take pride in writing solutions that are clear and maintainable. I would welcome the chance to bring this motivation to your company and to grow through real-world projects.

Thank you for your time and consideration. I would be glad to discuss my application in an interview.

Kind regards,

Erik Kovács
